

SYSTEM AND METHOD FOR INTERLINKING MEDICAL-RELATED DATA AND  
PAYMENT SERVICES

5

ABSTRACT OF THE DISCLOSURE

The invention enables the aggregation of medical patient financial and medical service access data. With the aggregation of data, a patient can conduct financial and medical-related transactions with different services from a single access point using a single patient identifier and access code. Further, with the aggregation of data, payment  
10 to a medical service provider from multiple accounts is automated.
